Merchant Partners Interface Checklist

- Verify the hardware you received from Merchant Partners includes the components below. If it does not, please contact your Merchant Partners Sales Representative.

Ingenico® iSC 250

Power/Network Cable

RJ45 Coupler

- The credit card terminal is a network device and requires a wired connection. If an available network port is not within close proximity to the placement of the terminal, you may use the RJ45 Coupler included in the hardware package with another network cable to extend the range.
- A high speed internet connection is required.
- For the security of your network and to help you to maintain PCI compliance, ISI requires a router that supports VPN and/or a white list of SSH for remote connectivity. If your store has a Cisco RV180W or Ubiquiti ER-X router, then these connection methods are supported and will have been configured by ISI prior to your purchase. If you are not sure if your router supports this or are utilizing an older model router, please contact ISI Support to confirm. Your ISI Sales Representative can assist you if you would like to purchase a Ubiquiti ER-X router. If purchasing a new router, ISI also recommends adding a wireless access point from ISI because the Ubiquiti ER-X router is not fitted with an antenna.
- Verify your LubeSoft® system is installed with the latest operating system provided by ISI. The latest version is 14.04 and may be verified by clicking the  button in the upper right hand corner of the desktop screen. If it does not list 14.04, please contact ISI Support to discuss the upgrade process.
- Plain paper invoice printing is required to utilize the integrated credit card solution. Please contact ISI Support if you have any questions about invoice formats.
